**Re: Traffic Evaluation
1251 Jumping Brook Road
Proposed Delivery Station
Borough of Tinton Falls, Monmouth County, NJ
Langan Project No.: 100775501**

Dear Board Members:

Langan Engineering & Environmental Services has prepared this traffic statement for the proposed redevelopment of the Twin Brooks Golf Center in the Borough of Tinton Falls, Monmouth County, New Jersey. The applicant proposes to redevelop the golf center into a delivery station. Specifically, we performed the following major tasks:

- reviewed the redevelopment proposal,
- reviewed the projected operations and associated site trip generation,
- assesses traffic impact, and
- reviewed the site plan for access and circulation adequacy.

We expect area traffic operations will not significantly change because of the proposed delivery station, particularly during commuting periods. Moreover, the site design is consistent with current standards and provides adequate access and circulation.

REDEVELOPMENT PROPOSAL

The Twin Brooks Golf Center is located on the west side of Jumping Brook Road between Essex Road and Green Grove Road. The golf center includes a clubhouse and a variety of golf-related activities. Two formal driveways and a dirt maintenance driveway provide site access along Jumping Brook Road. Figure 1 (attached) shows the site location.

The applicant proposes to redevelop the site and construct an approximate 113,016 square foot delivery station. The delivery station will operate seven days a week and will use delivery vans and cars to deliver packages to end customers. "Last mile" is the common description of that last leg of the delivery process. Site changes to accommodate the delivery station include the construction of vehicle staging and loading spaces, vehicle parking spaces and site driveways.

The applicant proposes to close the existing driveways and construct three new driveways along Jumping Brook Road. The proposed site driveways will be full-access and stop controlled. Delivery vans will use the north driveway (Driveway 1). Delivery vans, delivery cars, employee vehicles, and tractor-trailers will use the center driveway (Driveway 2). Delivery vans and employee vehicles will use the south driveway (Driveway 3).

EXISTING CONDITIONS

Study Intersections

Jumping Brook Road is an undivided road that provides one lane and a shoulder for each travel direction near the site. The Jumping Brook Road corridor will accommodate all site-generated traffic. Accordingly, we focused this traffic evaluation on the following intersections:

- NJ Route 66 and Jumping Brook Road,
- Asbury Avenue (County Route 16) and Green Grove Road,
- Jumping Brook Road and Essex Road,
- Jumping Brook Road and Walmart North Driveway / Site Driveway 1,
- Jumping Brook Road and Site Driveway 2, and
- Jumping Brook Road and Site Driveway 3.

Aerial images of each existing intersection are part of the attached analysis printouts along with the traffic signal timing for the NJ Route 66 and Jumping Brook Road intersection. We used field timings for the Jumping Brook Road and Asbury Avenue intersection analysis.

Existing Traffic Volumes

Langan arranged for traffic counts conducted at the Jumping Brook Road intersections with NJ Route 66 and Asbury Avenue on Tuesday, September 17, 2019, from 6:00 AM to 6:00 PM. Additionally, we had an automatic traffic recorder (ATR) installed along Jumping Brook Road in front of the site to continuously record hourly traffic volumes. The ATR recorded hourly traffic volumes from Monday, September 16, 2019 to Monday, September 23, 2019. We also obtained traffic counts collected at the intersection of Jumping Brook Road and Essex Road on Tuesday, July 16, 2019 by another consultant.

Based on the traffic counts, the common weekday morning network peak hour occurred from 7:45 AM to 8:45 AM and the common weekday evening network peak hour occurred from 4:30 PM to 5:30 PM. We also identified traffic volumes for the weekday delivery station peak hour of 10:00 AM to 11:00 AM.

We compared the July traffic counts to the September traffic counts and found the July counts were slightly higher. Accordingly, we increased the September counts by 8% to account for summer peak conditions and to derive the existing peak hour traffic volumes. We also estimated traffic volumes at Walmart's north driveway intersection with Jumping Brook Road since we do not have traffic counts at that intersection.

Attached are the traffic counts and a figure that shows the existing peak hour traffic volumes.

Accident Analysis

We obtained copies of New Jersey Police Crash Investigation Reports from the Tinton Falls and Neptune Township police departments for the adjacent roadway and intersections for the years 2017 through August 2020. Table 1 summarizes the number of accidents per year at each study intersection and site driveway.

Table 1 – Accident Reports By Year

Intersection	2017	2018	2019	2020
NJ Route 66 and Jumping Brook Road	5	17	21	12
Jumping Brook Road and Essex Road	0	1	5	0
Jumping Brook Road and Golf Center Driveways	0	1	1	0
Jumping Brook Road and North Walmart Driveway	0	0	1	1
Asbury Avenue (CR 16) and Green Grove Road	6	0	1	1

The accident history at each intersection is consistent with our expectations for these types of intersections. The majority of accidents at the NJ Route 66 and Jumping Brook Road intersection consisted of rear-end accidents, which are inherent to intersections controlled by a traffic signal.

Attached is a figure summarizing the accident data for the study area.

TRIP GENERATION

We expect the delivery station will have the attached tenant-provided trip projections. The delivery station's finite operating capacity dictates those trip projections. The operating capacity is primarily a function of the sorting equipment inside the building and the vehicle loading spaces.

The delivery station will use the following approximate core employee shifts:

- Shift 1 – 2:00 AM to 12:30 PM – 93 employees,
- Shift 2 – 6:00 AM to 2:30 PM – 28 employees,
- Shift 3 – 1:30 PM to 10:00 PM – 28 employees,
- Shift 4 – 2:00 PM to 6:00 PM – 23 employees, and
- Shift 5 – 12:00 PM to 10:30 PM – 5 employees

Outside the above core shifts, there will be a limited amount of employees inside the building doing small tasks such as equipment maintenance or janitorial services.

The tenant expects some of their employees will carpool, take area mass transit, or use other means (e.g. walking or biking) to commute to and from the delivery station. Bus service is within walking distance of the site. To be conservative, the attached trip projections assume all employees will commute using their own vehicle.

The delivery station will receive approximately 19 tractor-trailers each day. Approximately 15 tractor-trailers will arrive to and depart from the site between 6:00 PM and 7:30 AM and

approximately four tractor trailers will arrive to and depart from the site between 8:00 AM and 5:30 PM. Tractor-trailer arrivals and departures will be spread evenly over those timeframes and amount to approximately 1-2 tractor trailer trips in any single hour. Employees inside the building will empty the tractor-trailers and sort the packages into individual delivery routes. Delivery vehicle drivers will then transfer and load the sorted packages into delivery vehicles as described below.

From 9:00 AM to 11:30 AM, approximately 195 delivery van drivers will drive to the site in their personal vehicle. The delivery van drivers will park their personal vehicles, get into delivery vans and drive to the staging/loading area. The delivery van drivers will load their delivery vans with packages. Once the delivery van drivers are finished loading their delivery vans, they will exit the site and make their deliveries over the course of their workday. The delivery van drivers will start returning to the site at 7:00 PM at the end of their workday. They will then leave the site in their personal vehicles. Delivery Service Partner (DSP) is the descriptor for the delivery van drivers.

From 4:00 PM to 5:30 PM, approximately 54 drivers with their personal vehicles will enter the site, drive to the staging/loading area, load their vehicles with packages, and then exit the site to make their deliveries. The majority of these drivers will not return to the site. Flex is the descriptor for the personal vehicle delivery drivers.

Given the unique operation, the delivery station will generate little traffic during weekday peak commuting periods from 7:00 AM to 9:00 AM and from 4:00 PM to 6:00 PM. Table 2 below shows the delivery station estimated trip generation for various hours of a typical day.

Table 2 - Trip Generation Estimates

Time Period	Trips
Weekday Morning Network Peak Hour (7:45 AM to 8:45 AM)	
Enter	0
Exit	1
Total	1
Weekday Morning Delivery Station Peak Hour (10:00 AM to 11:00 AM)	
Enter	95
Exit	181
Total	276
Weekday Evening Network Peak Hour (4:30 PM to 5:30 PM)	
Enter	1
Exit	55
Total	56
Weekday Evening Delivery Station Peak Hour (7:30 PM to 8:30 PM)	
Enter	125
Exit	125
Total	250

We have not taken credit for the golf center traffic generated during the traffic counts. Consequently, the net difference in site-generated traffic will be less than the trip generation estimates shown in Table 1.

TRIP DISTRIBUTION AND ASSIGNMENT

We used published journey-to-work census data to prepare trip distribution models for the delivery station traffic. We assigned site-generated traffic based on the likely routes motorists would use to travel to and from the site.

We anticipate trucks will be arriving from and departing to tenant-managed facilities located to the north and west of the proposed delivery station. We are aware of such facilities in Robbinsville, Cranbury, Carteret, Edison, and Staten Island. The likely routes trucks would use between the proposed delivery station and these area facilities would consist of the Garden State Parkway, NJ Route 66, NJ Route 34, and NJ Route 18 to the north of the NJ Route 34 intersection. Accordingly, we do not anticipate any trucks using the Asbury Avenue and Green Grove Road intersection.

Table 3 on shows the trip distribution for the delivery station.

Table 3 –Trip Distribution

Direction (To/From)	Arrival & Departure Distributions	
	Cars & Vans	Trucks
NJ Route 66 (West)	42%	100%
NJ Route 66 (East)	2%	-
Asbury Avenue (CR 16) (West)	32%	-
Asbury Avenue (CR 16) (East)	8%	-
Jumping Brook Road (South)	6%	-
Green Grove Road (North)	10%	-
Total	100%	100%

Attached are trip distribution and site-generated traffic volume figures.

FUTURE TRAFFIC VOLUMES

For analysis purposes, we assumed a 2021 build year. We increased the existing traffic volumes by an annual 2.5% growth rate to account for background traffic growth and derive the 2021 base traffic volumes. The New Jersey Department of Transportation has published that growth rate for Monmouth County. We then added traffic volumes for an adjacent development to develop the 2021 no-build traffic volumes. That adjacent development will be located on the northwest corner of the Jumping Brook Road and Essex Road intersection and is a shopping center consisting of 9,007 sf of retail space and a 2,250 sf restaurant with a drive-thru window. Finally, we added site-generated traffic to the 2021 no-build traffic volumes to derive the 2021 build traffic volumes. Attached are the traffic volume worksheets.

OPERATIONAL ANALYSIS

We conducted a capacity analysis of the study intersections using Synchro software. The Synchro software uses methodologies contained in the Highway Capacity Manual published by the Transportation Research Board. Level of Service (LOS) is the term used to denote the

operating condition of a road segment or intersection under prevailing conditions and reflects several factors such as number of travel lanes, traffic volume, speed, and motorist delay. LOS designations range from A to F, with LOS A representing the best operating conditions and LOS F representing poor operating conditions.

LOS designations are different for signalized and unsignalized intersections. For signalized intersections, the analysis considers the operation of all traffic entering the intersection. For unsignalized intersections, the analysis considers the operation of all movements that conflict with other movements, such as main-line left turns and traffic exiting a side street.

The HCM defines LOS for signalized intersections as follows:

<u>LOS</u>	<u>Delay Range (sec/veh)</u>
A	<10 sec
B	≥10 and ≤20 sec
C	≥20 and ≤35 sec
D	≥35 and ≤55 sec
E	≥55 and ≤80 sec
F	>80 sec

The HCM defines LOS for unsignalized intersections as follows:

<u>LOS</u>	<u>Delay Range (sec/veh)</u>
A	<10 sec
B	≥10 and ≤15 sec
C	≥15 and ≤25 sec
D	≥25 and ≤35 sec
E	≥35 and ≤50 sec
F	>50 sec

Capacity Analysis

Attached are the capacity analysis printouts. Tables 4 through 6 on the following pages summarize the levels of service and delays, anticipated queues, and volume-capacity ratios for the weekday morning network peak hour, weekday morning delivery station peak hour and weekday evening network peak hour. We did not analyze the weekday evening delivery station peak hour (7:30 PM to 8:30 PM). The attached ATR data along Jumping Brook Road and NJ Route 66 indicate that traffic volumes in the study area from 7:30 PM to 8:30 PM are approximately 50 percent lower than the volumes during the weekday evening peak hour (4:30 PM to 5:30 PM) that we analyzed. Moreover, the traffic volumes in the study area from 7:30 PM to 8:30 PM are approximately 20 percent lower than the traffic volumes from 10:00 AM to 11:00 AM. Therefore, the delivery station will not significantly impact the study area during any hour including the weekday evening delivery station peak hour (7:30 PM to 8:30 PM).

As the tables show, the proposed delivery station will not significantly affect area traffic operations during peak hours. We note the Essex Road eastbound approach to the Jumping Brook Road intersection will operate with delay during the evening peak hour in the no-build condition and will continue to do so in the build condition. In the build condition, the 95th percentile queues for the Essex Road eastbound approach will increase by one vehicle or less during all peak hours compared to the no-build condition. We accounted for improvements proposed by others at the Jumping Brook Road and Essex Road intersection. We note that those intersection improvements will better-align turning vehicles at the intersection; however, those improvements will not result in better traffic operations.

SITE PLAN REVIEW

We have reviewed the site plan for the proposed delivery station. In particular, we focused our review on access, circulation and parking design, which the following items address:

The site plan proposes three full-access and stop-controlled site driveways along Jumping Brook Road. We expect the site driveways will allow vehicles to turn into and out of the site efficiently.

The proposed passenger car parking supply provides perpendicular parking. Those perpendicular parking spaces will be 9.0 feet wide and 20.0 feet deep served by two-way

aisles with a minimum width of 24.0 feet. These parking space dimensions and aisle widths are consistent with current car parking design standards.

The proposed van parking supply also provides perpendicular parking. Those perpendicular parking spaces will be 11.0 feet wide and 27.0 feet deep served by two-way aisles with a minimum width of 30.0 feet. These parking space dimensions and aisle widths are consistent with current van parking design standards.

Based on our review, we believe the site plan provides convenient access and circulation throughout the site.

CONCLUSIONS

We expect area traffic operations will not significantly change because of the proposed delivery station. In addition, the site design is consistent with current standards and provides adequate access and circulation.

Should you have any questions or comments concerning this traffic evaluation, please do not hesitate to contact our office.

Sincerely,
Langan Engineering and Environmental Services, Inc.

CAPACITY ANALYSIS PRINTOUTS

NJ ROUTE 66 and JUMPING BROOK ROAD INTERSECTION

90 – SECOND BACKGROUND CYCLE

<u>Phase</u>	<u>Signal Indications</u>							<u>Time (Seconds)</u>		
	<u>1.2</u>	<u>4.5</u>	<u>3,6, 14.15</u>	<u>7.8</u>	<u>9.10</u>	<u>11.12</u>	<u>13, 16.17</u>	<u>I</u>	<u>II</u>	<u>III</u>
VEHICLE ACTUATION										
A) Route 66 Lead Lefts Change	<G-/R <Y-/R	<G-/R <Y-/R	R R	R R	R/-G> R/-Y>	R R	R R	5 – 12 3	5 – 7 3	5 – 10 3
B) Route 66 ROW Change Clearance	G Y R	G Y R	G Y R	R R R	R R R	R R R	R R R	53 – 20 5* 2	53 – 16 5* 2	53 – 23 5* 2
C) Jumping Brook Road Lead Lefts Change	R R	R R	R R	<G-/R <Y-/R	R R	<G-/R <Y-/R	R R	5 – 7 3	5 – 10 3	5 – 10 3
D) Jumping Brook Road ROW Change Clearance	R R R	R R R	R R R	G Y R	G Y R	G Y R	G Y R	7 – 31 3 4	7 – 37 3 4	7 – 27 3 4
Emergency Flash	Y	Y	Y	R	R	R	R	-	-	-

NOTES:

1. The memory circuits are to be disconnected.
2. The vehicle extension shall be set at 2 seconds.
3. The manual control is to be disconnected.
4. Actuation of pedestrian push button shall call Phase D and guarantee a minimum of 30 seconds of green time.
5. The left-turn lanes on Route 66 are to be wired separately but concurrently timed if actuation occurs on both approaches. Each left-turn lane shall have the capability of extending or terminating independently of the other. If one of the left-turn lanes terminates, the non-conflicting through movement shall be initiated and the conflicting right-turn overlap shall be terminated prior to Phase B for Route 66.
6. The left-turn lanes on Jumping Brook Road are to be wired separately but concurrently timed if actuation occurs on both approaches. Each left-turn lane shall have the capability of extending or terminating independently of the other, thereby reverting the timing to the non-conflicting through movement.
7. *An offset of 58 seconds is to be measured from the beginning of yellow for Route 66 traffic at the Asbury Avenue intersection to the beginning of yellow for Route 66 traffic at this intersection.
8. Phase D must follow Phase C actuation.
9. Phase A can only follow Phase D.

HOURS OF OPERATION: I - A.M. Peak / 6:00 A.M. – 9:00 A.M., Monday – Friday
 II - P.M. / Sat. Peak / 3:00 P.M. – 7:00 P.M., Monday – Friday and All Day Saturday
 III - Off Peak / All Other Times
